

THE MICHIGAN CONTEXT AND PERFORMANCE REPORT CARD - HIGH SCHOOLS 2018 -

By Ben DeGrow and Ronald Klingler

The Mackinac Center for Public Policy is a nonpartisan research and educational institute dedicated to improving the quality of life for all Michigan residents by promoting sound solutions to state and local policy questions. The Mackinac Center assists policymakers, scholars, businesspeople, the media and the public by providing objective analysis of Michigan issues. The goal of all Center reports, commentaries and educational programs is to equip Michigan residents and other decision makers to better evaluate policy options. The Mackinac Center for Public Policy is broadening the debate on issues that have for many years been dominated by the belief that government intervention should be the standard solution. Center publications and programs, in contrast, offer an integrated and comprehensive approach that considers:

- All Institutions. The Center examines the important role of voluntary associations, communities, businesses and families, as well as government.
- All People. Mackinac Center research recognizes the diversity of Michigan residents and treats them as individuals with unique backgrounds, circumstances and goals.
- **All Disciplines.** Center research incorporates the best understanding of economics, science, law, psychology, history and morality, moving beyond mechanical cost-benefit analysis.
- All Times. Center research evaluates long-term consequences, not simply short-term impact.

Committed to its independence, the Mackinac Center for Public Policy neither seeks nor accepts any government funding. The Center enjoys the support of foundations, individuals and businesses that share a concern for Michigan's future and recognize the important role of sound ideas. The Center is a nonprofit, tax-exempt organization under Section 501(c)(3) of the Internal Revenue Code. For more information on programs and publications of the Mackinac Center for Public Policy, please contact:

Introduction^{*}

The 2018 Michigan Public High School Context and Performance Report Card marks the fourth edition in a series of analyses that measure high school performance, starting with the 2012 report and repeating at two-year intervals. This report is a school-level assessment of academic performance based on a four-year average of state standardized tests. Unlike assessments produced by the Michigan Department of Education, students' socioeconomic status factors significantly into a school's grade on this report card.

The goal of this report card is to provide another helpful dimension to identifying the relative effectiveness of schools so that parents, educators and school leaders can have a more accurate and well-rounded picture of school performance. The Context and Performance Report Card includes a brief explanation of the data and methodology used to rank Michigan high schools. Selected results are also featured, among them the best- and worst-performing high schools and those high schools that have exhibited the greatest improvement or decline in performance over time. A full list of all high school results follows and detailed statistical information can be found in the appendices.

Data and Methods

The research methodology used for this report is based on a 2006 University of Arkansas study and previously published Mackinac Center report cards. Regression analysis predicts how well each school would perform given the socioeconomic makeup of its students. Schools are then ranked by how well they actually did relative to their predicted performance. More details on the methodology can be found in Appendix A.

To capture the socioeconomic differences among Michigan high schools, this study compares the number of enrolled 11th grade students who were eligible for free school lunches through the federal National School Lunch Program in each school. Although researchers commonly use the percentage of students eligible for either a free lunch or a reduced-price lunch as a proxy for socioeconomic status, this report card only employs the percentage of students eligible for a free lunch. This proved to be a better predictor of student academic outcomes.[†]

Consistent with prior report cards and most education research, the statistical results from our analysis show that the percentage of students eligible for free lunch is negatively correlated to a school's average test scores. In other words, the more students eligible for a free lunch, the lower the high school's average score on standardized tests tend to be.

^{*} Some language used in this study appears in previously published Mackinac Center publications.

[†] Audrey Spalding, "The Michigan Context and Performance Report Card: Public Elementary and Middle Schools, 2013" (Mackinac Center for Public Policy, 2013), 36-37, https://perma.cc/S8EP-7BHJ. Further, as noted in the Center's 2012 and 2014 high school report cards, it is possible that certain high schools are more successful at identifying and reporting students as being eligible for the National School Lunch Program. If these schools also tend to perform systematically differently from other high schools, the inclusion of free lunch eligibility in the model may lead to classification bias. The extent to which this happens is unknown. Regardless, the free lunch measure is used because it is the best available proxy for student socioeconomic status available.

Academic performance was measured using average standardized test scores from the 2015, 2016, 2017 and 2018 Michigan Merit Examinations, which includes elements from another state standardized test, the Michigan Student Test of Educational Progress, or M-STEP, and the SAT, a common college admissions exam. State law requires that the MME be administered to all enrolled 11th graders as a condition of a school district receiving state aid.^{*} The first of the four years of data analyzed for this report — 2015 — is based on student achievement results on four online M-STEP subject tests in English language arts, mathematics, science and social studies. In the three years since then, however, the M-STEP mathematics and English language arts tests have been replaced by two parts of the SAT: mathematics and evidence-based reading and writing tests.[†] Altogether, results from up to 15 different tests were used to determine each school's overall score.[‡]

A school's average scale score for each individual M-STEP or SAT test was standardized, then scores from the different test subjects were averaged together to get an overall standardized, average score. For each of the four years examined, a school's standardized, average scores were compared with its predicted performance scores, based on the percentage of students receiving free lunch at the high school. The results from these calculations were averaged and multiplied by 100 to produce an overall adjusted score for each school in a given year. The four yearly adjusted scores were averaged together to create a total "Context and Performance Score" for each school. Through the remainder of the text, we will refer to this measure as the "CAP Score."

A CAP Score below 100 indicates that a high school's average score was below its predicted level, given student poverty, while a CAP Score above 100 indicates a high school's average score exceeded its predicted level, given student poverty. The CAP Scores were also used to assign letter grades to each school. The letter grades were based on a standard bell curve distribution, with 10 percent of schools receiving A's, 20 percent receiving B's, 40 percent receiving C's, 20 percent receiving D's and 10 percent receiving F's.

These grades and CAP Scores are relative; they are not based on an absolute standard of academic performance. Instead, they indicate how each high school compares to other high schools on multiple years of standardized tests given the school's respective student population. By definition, the average of the scores for all of the public high schools in the state will be 100, corresponding to a C.

Finally, a percentile rank was also calculated for each CAP Score. This rank is the percentage of schools each high school outperformed. For example, if a school's percentile rank is 60 percent, this means that school's relative performance was better than 60 percent of the schools included in this report card. This provides an easy method for comparing high schools.

^{*} MCL § 388.1704b.

[†] Strong correlations exist between a high school's: 1) 2015 M-STEP ELA and 2016 SAT EBRW scores; and 2) 2015 M-STEP Math and 2016 SAT Math scores. See section "M-STEP and SAT Test Results" in Appendix B.

[‡] The number is 15, because results from only 3 of 4 tests in 2018 have been released. As reported, "State education officials plan to withhold the public release of science scores from the Michigan Student Test of Educational Progress for two years because they say the exam is a sample test that does not yet measure student proficiency." Jennifer Chambers, "Michigan to Withhold Science Test Scores for Two Years" (*The Detroit News*, Aug. 22, 2018), https://perma.cc/Z693-ZVRG.

Classifying Schools

In all, 674 Michigan public high schools qualified to be part of this analysis. Included were schools with a unique state-recognized code and all of the following:

- 1) A publicly reported average scale score for at least nine of the 15 tests used in this analysis;
- 2) Publicly reported student socioeconomic data for at least three of the four years;
- 3) Open and active as of June 2018; and
- 4) Not recognized primarily as an alternative, special needs or adult education school.

Each school is also identified by its geographic setting. As shown below in Graphic 1, schools are classified into 12 different groupings. Four major "locale" types — urban, suburban, town or rural — are subdivided into three subgroups apiece.^{*} Rural and suburban schools comprise nearly 70 percent of the schools in the report card.

Locale	No. of Schools	Percentage of Schools
City: Large	37	5.49%
City: Midsize	24	3.56%
City: Small	55	8.16%
City: Total	116	17.21%
Suburb: Large	149	22.11%
Suburb: Midsize	28	4.15%
Suburb: Small	22	3.26%
Suburb: Total	199	29.53%
Town: Fringe	30	4.45%
Town: Distant	31	4.60%
Town: Remote	26	3.86%
Town: Total	87	12.91%
Rural: Fringe	96	14.24%
Rural: Distant	122	18.10%
Rural: Remote	54	8.01%
Rural: Total	272	40.36%
All Schools	674	100.00%

Graphic 1: Sample of High Schools, by Locale Code

Schools were also categorized into three additional groups. Conventional schools are districtoperated, general admission schools available as the default attendance option based on a student's residence (though some nonresident students may enroll through Schools of Choice or another similar program). Labeled "district," these make up by far the largest share of those assessed.

^{*} The locale codes are based on U.S. Census Bureau classifications and assigned by the National Center for Education Statistics. See "Appendix C: Locale Codes" for more information.

Charter schools, known legally as public school academies, operate somewhat differently from district-run high schools. While they also cannot discriminate in student admissions, these schools are individually managed at the building level and enrollment relies entirely on families choosing to send their children there.^{*} Making up nearly 12 percent of those assessed in this report card, these schools are labeled "charter."

Some district-run public high schools in Michigan use selective admissions policies that require students to meet certain academic requirements in order to enroll. Average test scores from selective schools tend to be higher than those from schools without such policies. Labeled "selective" in the report card, these schools make up just over 3 percent of the sample.

School Type	Number of Schools	Percentage of Schools		
District	573	85.01%		
Charter	79	11.72%		
Selective	22	3.26%		
Total	674	100%		

Graphic 2: Sample of High Schools, by Type

Selected Results

Selected scores appear in the following sections. They include overall high- and low-performers, as well as standouts from both ends among conventional district and charter schools. CAP Scores for all 674 public high schools appear in the "Full Report Card" section, listed in alphabetical order.

^{*} There are several other differences between charter public schools and district-run schools. Charter schools can operate any grade configuration, kindergarten through 12th grade, are often operated by contracting with private management companies and are exempt from the state's requirement to grant teachers tenure. For more, see "Michigan Charter Schools – Questions and Answers" (Michigan Department of Education, Nov. 2017), https://perma.cc/X5MN-9U5D.

Top 25 High Schools Overall

Graphic 3 displays the top-scoring 25 public high schools in the state. Public charter and selective high schools are both disproportionately represented, each making up eight of the top 17. Michigan Mathematics and Science Academy narrowly beat out Star International Academy, which secured the first-place honor in the first three editions of the CAP Report Card. Star International Academy's high CAP Score is consistent with its performance on previous editions, but Michigan Mathematics and Science Academy registered the CAP Report Card's highest-ever score. Ann Arbor is home to two of the nine district schools among the top 25.

Bottom 25 High Schools Overall

Graphic 4 highlights Michigan's bottom-scoring 25 public high schools. The lowest scorers, led by Saginaw High School, are listed first. Nearly half (12) of the schools on the list are located in Detroit, all of which are district-operated. Five of the bottom 25 are charter schools, including two different campuses of FlexTech High School.

Top 25 District-run High Schools

Graphic 5 reveals the top 25 Michigan district-run conventional public high schools. Fifteen of them return to the top 25 list from the 2016 report card, including 10 of this year's 12 highest-rated schools. As in 2016, three of the top 10 are located in Ann Arbor. That city's Huron and Pioneer High Schools, along with Okemos High School, make their third consecutive appearances on the top 10 list of district high schools.

Bottom 10 Charter High Schools

Graphic 8 displays the bottom 10 public charter high schools in Michigan. Six of these schools also finished in the bottom 10 for 2016, though only one has repeated the feat in all four editions: Creative Technologies Academy.

Charter Performance by Authorizing Agency

Nearly three-fourths of the 79 charter high schools that received a CAP Score are authorized by one of eight different public universities — most prominently Central Michigan University and Grand Valley State University. The performance of the 60 university-authorized charter schools runs the gamut, though the mean CAP Score for these schools stands at 101.61, above the overall average.

Finishing even higher is the collection of 11 charter schools authorized by community colleges (nine by Bay Mills Community College), with an average CAP Score of 104.61. The remaining charter schools not authorized by a community college or public university registered much poorer performance on average. The five charters authorized by intermediate school districts had an average CAP Score of 94.98 and the three authorized by local school districts scored an average of just 93.24.

Among the eight chartering agencies that authorize two or more schools on the list, Oakland University notched the highest average of 121.21. The lowest average CAP Score for an authorizer belongs to Eastern Michigan University at 89.09.

Selective High Schools

This report incorporates 14 schools from the 2016 report card with selective admissions criteria, in addition to eight others, mostly early college and middle college programs. All of the selective schools identified are district-run schools, since Michigan law prohibits charter schools from using academic standards to limit enrollment.^{*}

It is not surprising, given the selective nature of their admissions policies, that most of these high schools rate highly on the report card. Eleven of the 22 received A grades (including six of the top 10 schools overall), and seven received B grades. Despite its selective standards, one Flint school finished with a CAP score below the expected rate of 100.

^{*} MCL § 380.504(2).

Graphic 9: Selective High Schools Ranked Based on 2015-2018 Overall CAP Score

* Scores based on only three years of data.

Most Improved and Largest Declines

The previous edition of the High School Context and Performance Report Card introduced an added dimension of long-term comparison. It can be instructive to see which schools have significantly raised or reduced their CAP Scores or have maintained consistently strong or weak long-term performance.

In all, 526 of the 674 high schools appearing on this report card also were rated in the first edition in 2012. An additional analysis enables a comparison of relative performance of these 526 high schools from the time frame of 2008-2011 to the newest measured CAP Score from 2015-2018 data.^{*} That group includes 503 conventional district schools, 17 charter schools and six selective schools. To make the comparison between these two time periods, two sets of percentile rankings were generated that only included this set of 526 qualifying schools. For the purposes of making the comparison, it is more helpful to see how the same group of schools perform relative to one

^{*} For this comparison, the 2012 baseline scores are taken from the same recalculated scores used to make the comparison in the 2016 report card.

another, rather than to a larger set of different schools, some of which may not have been included on both lists.

Most schools' CAP Scores remained steady over time: about 42 percent of the 526 qualifying high schools' CAP Scores in 2018 were within 10 points (or roughly 10 percentage points) of their CAP Score in 2012.

As shown in Graphic 10, 18 schools dramatically improved by boosting their ranking by 50 percentile points or more from 2012 to 2018. While rural schools made up 39 percent of the 526 schools, they comprise half of those showing the greatest improvement. That includes Stephenson Middle/High School near the Upper Peninsula's Wisconsin border, the only school to rise from an F-level to an A-level grade within the sample. Detroit Community Schools, one of three charter high schools to make the list, joined rural Eau Claire and Kingston, as the other high schools to increase their ranking by more than 80 percentile points.

Rural schools, which tend to have smaller numbers of enrolled test-takers, are more likely to have fluctuating scores. Interestingly, though, one of the 10 largest high schools analyzed, Adlai Stevenson High School in Macomb County, registered an increase of nearly 58 percentile points and nearly made the top 10 for most improved. Lakeview High School and Allen Park High School are two larger metro Detroit area schools that also increased their ranking by 50 or more percentile points.

Rank	High School	School Type	District or Municipality	Locale	2012 Percent Rank	2018 Percent Rank	Change

Graphic 10: High Schools Increasing 50+ Points in CAP Percentile Ranking, 2012 vs. 2018

On the other hand, 22 of the 526 schools tumbled 50 or more percentile points in their ranking from 2012 to 2018. As in the 2016 report card comparison, the largest decrease was recorded by Pontiac Academy for Excellence, a charter high school in Oakland County — from the top 2 percent to the bottom 3 percent. Two urban conventional district schools, Ottawa Hills High School in Grand Rapids and Davis Aerospace High School in Detroit, made drops nearly as steep. High schools located in both towns and suburban areas are significantly underrepresented among the 22 largest declines.

Long-Term Performance

Some schools merit recognition for successfully surpassing predicted performance consistently for more than a decade. Incorporated in this analysis are the 511 Michigan high schools with CAP Score data for 11 consecutive years and that appear on all four report cards. The combined scores average the 11 annual CAP Scores, covering state tests taken from 2008 to 2018. A high average CAP Score reflects a consistent trend of high achievement based on enrolled student demographics.

The top 15 long-term performers shown in Graphic 12 represent all the same schools that appeared on this list in 2016, with a few notable changes. Grand Rapids' selective City Middle/High School ascended from fourth to second, while Okemos High School eclipsed Covert as the highest-ranked district-run school. Dearborn Fordson and Ann Arbor Huron also debuted in the top 10, as Detroit's Renaissance High School dipped from ninth to 14th.

Graphic 12: Top 15 Public High Schools Based on 2008-2018 Average Overall CAP Scores

As depicted in Graphic 13, the six lowest high schools in terms of long-term performance are all Detroit district high schools formerly overseen by the now-defunct Education Achievement Authority. Though the scores reflect an adjustment for student poverty, only two of the 15 lowest performers had a smaller share of students eligible for free lunches than the state average: Kensington Woods Schools, a Livingston County charter school, and the district-run Morrice Area High School in Shiawassee County.

Graphic 13: Bottom 15 Public High Schools Based on 2008-2018 Average Overall CAP Scores

Full Report Card: A-Z

Below is the full Context and Performance rankings for all 674 Michigan public high schools included in this report card. Schools are listed in alphabetical order. A CAP Score of 100 or better indicates a school did as well or better than expected, given its students' socioeconomic backgrounds. A school's "percent rank" indicates how the school scored compared to all the other schools assessed.

* Denotes schools that have less than four years of data publicly available, but still have enough publicly available data to be included in the model.

Appendix A: Calculating CAP Scores and Letter Grades^{*}

Calculating CAP Scores

The idea behind CAP Scores is to rate a school's performance on standardized tests while controlling for the economic status of students. The years used are 2015 through 2018, and the tests involved are both the interim and current M-STEP subject tests, plus the SAT mathematics and evidence-based reading and writing tests.

The first step in deriving the scores was to create an adjusted performance score for each year. To do this, the subject scores of the standardized tests for each year were themselves standardized to have a statewide average of 100, and a variance of 15.⁺ The ACT and MME/M-STEP subject scores were then averaged together to create an adjusted performance score for each year using the following equation:[‡]

Adjusted Performance =
$$100 + 15 \left[\frac{(School Avg. - State Avg.)}{S. D. of State Avg.} \right]$$

The adjusted performance for each year is then compared to a predicted performance. The predicted performance is the average score one would expect given the economic status of the students taking the tests. To get this predicted performance, the adjusted performance score for each year is regressed against the percentage of students being tested that qualify for free lunch, and then the regression equation is used to generate the predicted performance. The regression equation is as follows:

$$Adj_Perf_i = \beta_0 + \beta_1 (FREE)_i + \mu_i \tag{1}$$

where *Adj_Perf*_i is the average test score at school *i*;

 β_0 is a constant and is the predicted score of a school without any students eligible for a free lunch;

β₁ is the estimated impact of the student population's free lunch eligibility rate on a school's average score;

FREE, i is the number of students eligible for free lunch divided by the total student population;

and μ_i is the error term.

A unique equation is generated for each year, and that equation produces a predicted performance for each school for each year. As an example, in 2016 the predicted score for a school was approximately **119.192–54.1602(FREE)**.[§] Central High School in Traverse City had about 15.681 percent of its test-taking students eligible for free lunch. Thus, Central High School's

^{*} Some language used in this study appears in previously published Mackinac Center publications.

[†] For 2015, they were the four M-STEP interim subject tests. For 2016 and 2017, they were the SAT Mathematics and Evidence-Based Reading and Writing tests, as well as the M-STEP Science and Social Studies tests. For 2018, there were only three tests, as the Michigan Department of Education did not release the results of the M-STEP Science test.

[‡] This is slightly different from some earlier CAP methodology where regressions were run by subject

[§] For the different variables used to adjust each year's CAP Score calculation, see section "Regression Results" in Appendix B.

predicted score for that year was **119.192** – **54.1602**(**.15681**) = **110.699**. The predicted score is then compared to the actual score as a ratio, and multiplied by 100:

CAP = 100 X (Adjusted Performance/Predicted Performance)

This yields us the final CAP Score, for a given school, in a particular year. Central High School's adjusted performance for 2016, for example, was 113.4767, and so its CAP score for that year was **100 x 113.4767/110.699= 102.5092**. An overall CAP score is calculated by averaging the CAP Scores for each of the three or four years for which eligible data are available. This overall CAP Score is a good indicator for how the school generally performs given the socioeconomic makeup of its students.

Lastly, letter grades are assigned to schools based upon their percentile rank. The top 10 percent receive A's, the following 20 percent get B's, the next 40 percent C's, then the next 20 percent D's, and the lowest 10 percent are assigned F's.

Grade	Percentage of Schools
A	10
В	20
С	40
D	20
F	10

M-STEP and SAT Test Results

A pair of regression analyses were run to estimate the reliability of using two different testing instruments to assign schools a CAP Score. In 2015, Michigan 11th-graders took M-STEP interim tests in both mathematics and English language arts. Subsequent yearly CAP Scores were determined by student performance on the SAT's mathematics and evidence-based reading and writing tests.

The first scatterplot compares schools' results on the 2015 M-STEP English language arts assessment with the 2016 SAT evidence-based reading and writing section. The r-squared value of 0.53 means the first test explains more than half the variability of the second test:

The correspondence was even stronger between the two different math assessments, producing an r-squared value of 0.66. Two-thirds of the variability in the 2016 SAT math scores is explained by schools' performance on the 2015 M-STEP math test:

These levels of consistency indicate the reliability of using both sets of testing data to issue a CAP Score that covers the 2015 to 2018 school years.

Appendix C: Locale Codes

The National Center for Education Statistics assigns a school a particular "locale code" based on a formula created by the United States Census Bureau.

The Census Bureau's "urban-centric" locale codes categorize urban and suburban areas into subgroups based on their size; towns and rural areas are categorized based on their distance from urbanized areas and urban clusters. Distances are determined using straight-line or "Euclidean" distance.^{*}

The definitions of the 12 different locale codes appear in Graphic 1.

Locale Code	Definition
City: Large	Territory inside an urbanized area and inside a principal city with population of 250,000 or more
City: Midsize	Territory inside an urbanized area and inside a principal city with population less than 250,000 and greater than or equal to 100,000
City: Small	Territory inside an urbanized area and inside a principal city with population less than 100,000
Suburb: Large	Territory outside a principal city and inside an urbanized area with population of 250,000 or more
Suburb: Midsize	Territory outside a principal city and inside an urbanized area with population less than 250,000 and greater than or equal to 100,000
Suburb: Small	Territory outside a principal city and inside an urbanized area with population less than 100,000
Town: Fringe	Territory inside an urban cluster that is less than or equal to 10 miles from an urbanized area
Town: Distant	Territory inside an urban cluster that is more than 10 miles and less than or equal to 35 miles from an urbanized area
Town: Remote	Territory inside an urban cluster that is more than 35 miles [from] an urbanized area
Rural: Fringe	Census-defined rural territory that is less than or equal to 5 miles from an urbanized area, as well as rural territory that is less than or equal to 2.5 miles from an urban cluster
Rural: Distant	Census-defined rural territory that is more than 5 miles but less than or equal to 25 miles from an urbanized area, as well as rural territory that is more than 2.5 miles but less than or equal to 10 miles from an urban cluster
Rural: Remote	Census-defined rural territory that is more than 25 miles from an urbanized area and is also more than 10 miles from an urban cluster

Graphic 1: National Center for Education Statistics Locale Code Definitions[†]

NCES uses the following definitions to clarify the terms contained in Graphic 1:*

Principal City: Principal cities are large places that serve as the primary population and employment centers within a county or counties associated with at least one core of 10,000 or greater population, or "Core Based Statistical Area."[§]

Urban (urbanized area and urban clusters): An urban area is a densely settled core of Census Bureaudefined census block groups and census blocks that meet minimum population density requirements. A core area that contains a population of 50,000 or more is classified as an "urbanized area," and a core area with a population between 2,500 and 50,000 is classified as an "urban cluster."

Rural: All population and territory not included in an urbanized area or urban cluster.

About the Author

Ben DeGrow is the Mackinac Center's director of education policy. DeGrow joined the Center in 2015 after a long stint at Colorado's Independence Institute, where he provided expert analysis on school choice, school finance, collective bargaining and education employment policies. He has authored numerous policy reports and op-eds for various publications.

DeGrow graduated summa cum laude with a bachelor's degree in history from Hillsdale College, and went on to receive a master's degree in history from the Pennsylvania State University. Ben's experiences in the classroom include service as a university graduate assistant and as a substitute teacher in Michigan public schools. He also spent nearly a year on the editorial staff of the Hillsdale Daily News.

Ronald Klingler is a data science and information technology consultant based in Washington, D.C. He graduated in 2015 with a bachelor's degree in mathematics and economics and completed his master's degree in economics in 2016, both at Central Michigan University.

BOARD OF DIRECTORS

Hon. Clifford W. Taylor, Chairman Retired Chief Justice Michigan Supreme Court

Joseph G. Lehman President Mackinac Center for Public Policy

Jim Barrett Retired President and CEO Michigan Chamber of Commerce

Daniel J. Graf Chief Investment Officer Amerisure Mutual Holdings, Inc.

Dulce M. Fuller Owner Woodward and Maple

Richard G. Haworth Chairman Emeritus Haworth, Inc.

Kent B. Herrick President and CEO Thermogy

J.C. Huizenga President Westwater Group

Edward C. Levy Jr. President Edw. C. Levy Co.

Rodney M. Lockwood Jr. President Lockwood Construction Co., Inc.

Joseph P. Maguire President and CEO Wolverine Development Corp.

Richard D. McLellan Attorney McLellan Law Offices

D. Joseph Olson Retired Senior Vice President and General Counsel Amerisure Companies

The Mackinac Center for Public Policy is dedicated to improving the understanding of economic and political principles among citizens, public officials, policymakers and opinion leaders. The Center has emerged as one of the largest and most prolific of the more than 50 state-based free-market "think tanks" in America. Additional information about the Mackinac Center and its publications can be found at www.mackinac.org.

Additional copies of this report are available for order from the Mackinac Center.

For more information, call 989-631-0900, or see our website, www.mackinac.org.
